Department Head

ACKNOWLEDGEMENTS

The present thesis could never have come into its present form without the scholarly guidance and encouragement of respected teacher Mrs. Nirmala Shrestha. I am heavily indebted to her not only for guidance but for providing various related materials for research work. She played a best role to make this thesis “a finest one” by providing various books, journals, articles etc.

For this satisfaction of the plan to research on PhD scholars’ problem, Central Department of Library and Information Science, Tribhuvan University is offered much gratitude, especially, Dr. Madhusudan Karki, head of the department is owed much respect for his excellent cooperation, encouragement and in such different corrections. Bhola Kumar Shrestha, my external examiner, thoroughly went through my thesis and provided with invaluable suggestions. For his endeavor the words of thanks are never enough.

Bishnu Prasad Aryal helped me significantly at the time of starting thesis as my teachers Rudra Prasad Dulal, Bhim Dhoj Shrestha, Mohan Raj Pradhan, Ramesh Prajuli are thankful for their knowledge distribution into the department and everywhere in LIS field. Bijaya Kumar Pokharel and Ashok Thapa have taken much burden for the success of my work as they were always asked for help. Within the time limitation they helped me is always remembered. Without the enthusiasm of my brother Suresh Hachekali, to make a university graduate to me, the work was never come out. Chandrama Poudyal, my loving bhauju played momentous role to complete the research soon. I would like to present this certificate of MLib. to my mother Parbata Devi Niroula and father Dilli Raman Niroula for their eagerness to my study. My loving brother Deepak and bhauju Mandira are remembered in this regard.

My friends Ms. Deepa and Ms. Pratima are thankful for their swiftness for completion of the thesis. Indira Didi and Luna Didi were the best friends and guide for my grooming from the level of student to a professional. All friends of LISSA, TULSSAA, NLA and all professionals who always made me alert to timely submission of thesis are highly remembered. LISSA and INFOLIB helped me to work on such type of research. The work experience of both institution and publication highly motivated me. The staff Rabi Dai, Mina Lama, Sushil Yadav, Bhola Mahato, at the department kindly helped during the period of research. Last but not the least; I owe much for the works cited. All loopholes in this thesis are only faults of mine, for them I, myself is fully responsible.

Ramesh Niroula

ABSTRACT

The thesis entitled “INFORMATION SEEKING BEHAVIOUR OF PhD SCHOLARS UNDER THE FACULTY OF HUMANITIES AND SOCIAL SCIENCES, TU” has mentioned the situation of information, information seekers, and PhD researchers in social sciences in TU and library services available for providing PhD thesis research. The important aspects such as: background of the study in which definition of information, seeking of information, users behaviour, information explosion etc. has been defined. With having the above fact and situation the study has found out certain problems in information seeking behaviour within the library services such as: the researchers have not appropriate way to gain needed information; the varies on retrieval tools are not in uniform order etc. To find out the goal certain objectives such as: necessity of information seeking behaviour of PhD scholars, to gauge the difficulties while seeking of them etc. has been listed. The study was conducted within certain time and area limit. The time was taken October, 2010 to May 2011 and within the Kathmandu valley only.

The thesis has reviewed 17 related literatures on the information seeking behaviour and related topics. Within those reviewed literature 9 articles are reviewed from different national and international journals as well as conference papers, 5 are from different thesis and 3 literatures are from books. Those reviewed articles and books are mostly related with the information seeking behaviour.

This study has focused on the aspects of the retrieval of available information housed in or served through the library exploiting available tools. Five libraries of TU, Tribhuvan University Central Library (TUCL), The Centre for Economic Development and Administration (CEDA), Centre for Nepal and Asian Studies (CNAS), Research Centre for Applied Science and Technology (RECAST) and Research Centre for Educational Innovation and Development (CERID) have been selected. However, the respondents were on the available basis; not only within the libraries but on the other parts of the city too. Total 32 researchers were taken for the study. Out of them only 27 respondents returned the questionnaire distributed to them for the study. Among 27, form English and Nepali departments, each 9 respondents returned the question with their response. 67% population was from two departments maintained above. Other 22% were from Economic department, 4% respondents were from Linguistics following the same percentage by Population Studies and History departments. The researcher has used a set of questionnaire and informal interview. The questionnaire had 2 parts including a cover letter clarifying about the task. Part I was to fill up with personal information of the respondents. Part II consist the actual questions.

According to the tabulation of the study, most of the library users' (48%) are visiting the library once a week. Minimum presence in library of the users is the less availability of needed information. Out of 27, only 13 (48%) users give their time to library according to priorities. Only 6 (22%) respondents have the membership of special library. 21 (78%) respondents have no any membership of special library. They (100%) seek such types of membership but lack of special library on social science hurdles them. Manual tools are using heavily 41% by users in libraries of TU. The manual system follower; 41% among them 58% use the catalogue only. Most of the users use the catalogue card for retrieving needed information due to familiarity of catalogue card. 50% users of library database use it because of its familiarity. These all data are presented on 21 tables and 9 figures.

Lack of proper knowledge on information technology users are forced to use manual tools such as catalogue card, classification number, index, abstracts etc. Therefore the gap in technology is responsible for retrieval of the right information, to the right users, at the right time.

On the part of recommendation 15 points are recommended for improvement of the libraries and its services. For sound development of information exchange between users and library (Client-Server) every library specially libraries of Tribhuvan University should implement mechanical project economically, institutionally and morally too. Without proper and readymade user education the way handing over information is not clear. To implement a clear way of information distribution, training, workshops, refresher course and proper network not only within TU libraries but all source of information is must.

Ramesh Niraula

The Researcher

PREFACE

Prepared for the partial fulfillment of Masters' Degree of Library and Information Science, this thesis presents an overview of the existing condition of the resources and services of the five academic libraries of TU. It focuses lie on the PhD scholars of TU and their satisfaction level at the time of retrieval of needed information from those libraries. It serves as a problem founding materials so as to elicit their views and suggestions for the further improvement of the library services on offer.

An advanced academic degree awarded by universities is PhD degree. Research is the fact finding process and PhD degree can achieved after a long and deep research. PhD is the highest degree one can earn. The PhD has become a requirement for a carrier as a university professor or researcher in most fields. Most of the universities today recruit the researchers for serious study on their related field and award them by the doctor of Philosophy (PhD) degree.

For serious research the society should be advanced in knowledge preservation to presentation. Library can play vital role for the research process. Without information there is no possibility of research; and library housed large amount of information in various forms and formats. In information advanced society most of the information products should be available easily. Storage of the information is not more valuable if that is not available in easy way.

To reach the targeted group; the researcher used descriptive research design. Data collection and data analysis procedure are the other methods used for the research analysis. Some scholars' were interviewed indirectly and the recorded interview was analyzed at the time of data analysis. This thesis has documented various important aspects of libraries of TU.

This research study consists of six chapters. First chapter deals with the introduction of the study. The second chapter deals with literature review. The third chapter is focus of study. Research methodology, population, data collection and data analysis procedure are discussed in the fourth chapter. Fifth chapter presents analyzed data, presentation and interpretation to evaluate for set objectives are positively met or not. Sixth, the last chapter deals with summaries, conclusions and recommendations.
