IN PARTIAL FULFILLMENT OF THE REQUIREMENT FOR THE MASTER
DEGREE OF MATHEMATICS EDUCATION

TO
THE DEPARTMENT OF MATHEMATICS
MATHEMATICS EDUCATION
PRITHVI NARAYAN CAMPUS POKHARA
TRIBHUVAN UNIVERSITY
JANUARY, 2020

DEDICATION

This work is affectionately dedicated to my family, my husband Santosh Paudel, my brothers, sisters and also to my friends.

ACKNOWLEDGEMENTS

My first obligation is to the Department of Mathematics Education Prithvi Narayan Campus Pokhara for providing me an opportunity to prepare a thesis on the topic of “An ethno mathematical study on Newar community based on concept of basic mathematics.”

I would like to express my sincere thanks, gratitude and gratefulness to my supervisor and the Head of Department of Mathematics, Prithvi Narayan Campus Pokhara, Dr. Tribhuvan Sharma who helped me extremely by providing his valuable time for all sorts of ideas, techniques and information during the research work from the beginning to the end. His enthusiasm, patience, kindness and generosity are over memorable.

I wish to express my deep sense gratitude to, Maheshwor Pokhrel, a Lecturer of Prithvi Narayan Campus Pokhara for his valuable suggestions, guidelines, encouragements and giving constructive suggestions during the completion of this thesis.

My sincere appreciation goes to Lecturer Gangadhar Paudel, Assistant Lecturer Romharsan Paudel, Mitra Bhandu Baral, Bishnu Thapa and all the members of Department of Mathematics who provided me an opportunity to write this thesis by approving my proposal.

My thank goes to all the Newar people of Bagar for their kind co-operation in the acquisition of achievement scores required for this study.

Finally, I am obligated to all the friends who assisted me directly or indirectly in completing this study. Special thanks to my husband and my family for their invaluable contribution to my career and great patience, encouragement during my study.

Date: 2076/10/10

Bindu Sharma

ABSTRACT

The purpose of this study was to explore the counting system, algorithm of four fundamental operations (addition, subtraction, multiplication and division) and measurement system as practiced in Newar community of Pokhara Metropolitan city. This study is carried on cultural, historical, pedagogical and mathematical perspectives. It also links those processes with mathematics curriculum. The researcher adopted the qualitative research methods to unveil local ideas of mathematics to interpret Newar. The study was on ethnographic basis. Pokhara metropolitan city (Bagar) was chosen for the study area. 20 respondents were taken in the first phase to find out the mathematics they use in their real life and 6 respondents of different age groups in-depth interview in second phase. Observations were adopted as data collection techniques and methods. Coding, shorting, analyzing and interpreting the data were carried out.

The study found that the numeration system of Newar is base 10. Except 10 other grouping system like (20, 50, 100) etc. in practice. They have developed their own script of numerals. Everything is in oral form of mathematics. Old and illiterate Newar people have their own maths processes that is simple commulation process. Numbers are decomposed in 10 groups for carrying out subtractions and division. Addition and multiplication are done by commulation process. They have their own traditional system of measurement. Length is measured with hand and finger, volume is measured with Mana, Muri, liters. Young/ literate people of Newar use Hindu Arabic number system, to do four fundamental operation in short cut method and use standard tools for measurement of area, volume, weight and length and distance.
