RECOMMENDATION

This is to certify that **Monica Upadhyay** has completed this dissertation work entitled “**Microbiological profile of raw meat of Kathmandu valley and antibiotic susceptibility pattern of the bacterial isolates**” as a partial fulfillment of Master of Science in Microbiology under our supervision. To my knowledge this work has not been submitted for any other degree.

CERTIFICATE OF APPROVAL

On the recommendation of **Dr. Dwij Raj Bhatta**, Associate Professor, **Mr. Binod Lekhak**, Lecturer and **Mr. Dev Raj Joshi**, Lecturer, this dissertation work of **Monica Upadhyay** entitled “**Microbiological profile of raw meat of Kathmandu valley and antibiotic susceptibility pattern of the bacterial isolates**” approved for the examination and is submitted to the Tribhuvan University in the partial fulfillment of the requirements for M.Sc. Degree of Microbiology (Environment and Public Health).

Dr. Dwij Raj Bhatt

ACKNOWLEDGEMENTS

Firstly I am grateful to my supervisor Associate Professor **Dr. Dwij Raj Bhatta**, Head, Central Department of Microbiology, who was always available with advice and encouragement. So, the worth of his counsels is beyond my simple thanks.

No doubt, **Mr. Binod Lekhak**, Lecturer of Central Department of Microbiology, is a great influence, who helps me to speed up my work.

Similarly, I am greatly indebted to my supervisor **Mr. Dev Raj Joshi**, Lecturer of Central Department of Microbiology for his guidance and supervision for my research work.

I am thankful to **Dr. Megha Raj Banjara**, Lecturer of Central Department of Microbiology for his support for my research work.

Many others including colleagues and all the faculties and staffs of the Central Department of Microbiology, both directly and indirectly helped to make this dissertation complete.

I express my deep thanks to my family members from whom I received the tremendous support throughout the period.

Finally, would like to mention a special thank and an everlasting support and inspiration provided by my husband **Mr. Surendra Ghimire**.

Monica Upadhyay

ABSTRACT

Foods are the important vehicle for food borne pathogens. Improper sanitary and unhygienic practices adopted during slaughtering, processing and storage promotes the growth of several pathogens of meat which increases the incidence of food borne disease.

In order to find out bacterial flora of raw meat along with their antibiotic susceptibility pattern the study was conducted from December 2010 to May 2011 at the Central Department of Microbiology. During this study period 72 buff meat samples from different localities of Kathmandu valley were collected and subjected to bacteriological investigation. The bacteriological quality of raw meat was evaluated by total mesophilic count and coliform count. Few gram negative potential pathogens were also detected and antibiotic susceptibility profile of isolates was described. In this research work total bacterial count, total coliform count along with isolation and identification of *Salmonella* was carried out by standard microbiological methods. From this study the mesophilic bacterial load were found from 1.1×10^5 cfu/gm - 1.1×10^7 cfu/gm. Similarly total coliform count were found from <30 cfu/gm - 8.9×10^6 cfu/gm. Several bacteria were isolated during the study period which include *Escherchia coli*, *Klebsiella pneumoniae*, *Klebsiella oxytoca*, *Citrobacter freundii*, *Salmonella* Typhi and other *Salmonella*. Among the isolates *E.coli* was found to be most predominant among all gram negative bacteria. The results of antibiotic susceptibility test showed that majority of the isolated gram negative bacteria were sensitive to Amikacin, Cotrimoxazole, Chloramphenicol, Nalidixic acid, Tetracycline. Some isolates of *E.coli*, *Citrobacter*, *Enterobacter* and *Klebsiella oxytoca* were reported as Nalidixic acid resistant.

Nearly all samples were found to be contaminated with elevated load of coliform bacteria showing unhygienic practice during slaughtering process; however, the gram negative isolates were susceptible to common antibiotics.

Key words: Raw meat, mesophilic count, coliform count, *Salmonella*, antibiotic susceptibility
