RECOMMENDATION

This is to certify that **Ms. Rekha Thapa** has completed this dissertation work entitled **“URINARY TRACT INFECTION IN PREGNANT WOMEN AND ANTIBIOTIC SUSCEPTIBILITY PATTERN OF BACTERIAL ISOLATES WITH REFERENCE TO EXTENDED SPECTRUM BETA LACTAMASE PRODUCING STRAINS”** as a partial fulfillment of M. Sc. Degree in Microbiology under our supervision. To our knowledge this thesis work has not been submitted for any other degree.

Dr. Megha Raj Banjara, Ph.D.

Lecturer

Mr. Ganesh Prasad Acharya

M.Sc. MT (Pathology with Cytology)

CERTIFICATE OF APPROVAL

On the recommendation of **Dr. Megha Raj Banjara** and **Mr. Ganesh Prasad Acharya** this dissertation work by **Ms. Rekha Thapa**, entitled “**URINARY TRACT INFECTION IN PREGNANT WOMEN AND ANTIBIOTIC SUSCEPTIBILITY PATTERN OF BACTERIAL ISOLATES WITH REFERENCE TO EXTENDED SPECTRUM BETA LACTAMASE PRODUCING STRAINS**” has been approved for the examination and is submitted to the Tribhuvan University in partial fulfillment of the requirement for M. Sc. Degree in Microbiology.

Assoc. Prof. Dr. Dwij Raj Bhatta, Ph.D.

Head of the Department

ACKNOWLEDGEMENTS

I am very much indebted to my supervisor **Dr. Megha Raj Banjara**, Lecturer of Central Department of Microbiology, Tribhuvan University for his meticulous guidance and cooperation for the completion of this dissertation. I am equally obliged to my supervisor **Mr. Ganesh Prasad Acharya**, Senior Medical Lab Technologist, Paropakar Maternity and Women's Hospital.

Respectfully, I would like to express my sincere gratefulness to **Dr. Dwij Raj Bhatta**, Head of Department, Central Department of Microbiology for his cooperation, generosity, tremendous support, invaluable suggestions and enlightenment during whole of this research work.

I am thankful to all the teachers and staffs of Central Department of Microbiology for their valuable idea, moral support, and kind cooperation during this study.

I am deeply indebted to bacteriology laboratory of Paropakar Maternity and Women's Hospital for providing me laboratory facilities. I truthfully like to express my sincere thanks to all the staff of laboratory for their help while conducting this work. I acknowledge profound gratitude to my friend **Pramila Lamichhane** for her grand support.

Lastly, I would like to express my gratitude to my family and all my colleagues for their valuable suggestions.

.....

Rekha Thapa

ABSTRACT

The objective of this study was to determine the prevalence of urinary tract infection among the pregnant women and antibiotic susceptibility pattern of bacterial isolates with reference to extended spectrum - lactamase producing strains.

This cross sectional study was conducted at Paropakar Maternity and Women's Hospital, Thapathali, Kathmandu from June to December 2010 among 1720 pregnant women attending their antenatal checkup. Information regarding various characteristics was obtained and urine specimen was processed for isolation of bacteria, performing antibiotic susceptibility test by Kirby-bauer disc diffusion method and ESBL test by Double Disc Synergy Test (DDST) method.

The prevalence of UTI was found to be 30.5%. Majority of the pregnant women were from outpatient department of hospital (65.7%), urban areas of the country (52.3%), age group 21-30 years (74.3%), unemployed (73.3%), literate (88.0%), primiparous (54.3%) and second trimester of pregnancy (48.3%). Parity, education status, occupation of pregnant women, times of bathing, history of UTI, presence of pus cells and RBC in urine was found to be the risk factors of UTI from both univariate and multivariate analysis. *E. coli* (52.0%) was found to be the most predominant isolate and *Pseudomonas aeruginosa* (0.7%) was least one. Gentamicin and amikacin were found to be the most effective antibiotics. About 72.0% of the isolates were found to be multidrug resistant with higher rate in hospitalized patients (84.0%). About 20.0% of *E. coli* and 36.4% of the *Klebsiella pneumoniae* were found to be the ESBL producers.

There is a great need to follow strictly the hospital antimicrobial policy in order to prevent the emergence and dissemination of MDR and ESBL producing microorganisms as they are associated with the treatment failure of UTI.

KEY WORDS: Pregnant women, UTI, multi drug resistant, ESBL
