## LETTER OF RECOMMENDATION

This thesis entitled "**Monetary Approach to Balance of Payments in Nepal: An Analysis (FY 1990/91 to 2015/16)**" has been prepared by Mr.Udaya Raj Adhikari under my supervision.Ihereby recommend this it for approval by the thesis evaluation committee as a partial fulfilment of the requirements for the Degree of MASTER of ARTS in ECONOMICS.

.....  
Prof. Dr.Yadav Sharma Gaudel  
Thesis Supervisor  
Department of Economics  
Prithvi Narayan Campus  
Pokhara

Date: Nov 20, 2017

## **APPROVAL SHEET**

We certify that this thesis entitled “**Monetary Approach to Balance of Payments in Nepal: An Analysis (FY 1990/91 - FY 2015/16)**” submitted by Mr.Udaya Raj Adhikari to the Department of Economics P.N Campus, Pokhara, Faculty of Humanities and Social Sciences, Tribhuvan University, in partial fulfillment of the requirements for the Degree of MASTER of ARTS in ECONOMICShas been found satisfactory in the scope and quality. Therefore, we accept this thesis as a part of the said degree.

## **ACKNOWLEDGEMENT**

The research study entitled “Monetary Approach to Balance of Payments in Nepal : An Analysis (FY 1990/91-2015/16)” is a partial fulfilment for the degree of Master of Arts under the course designed by the Faculty of Humanities and Social Sciences, Tribhuvan University. It is my great pleasure to submit this thesis prepared under the guidance of Prof. Dr.Yadav Sharma Gaudel, who inspired me to do research work and provided the basic knowledge of monetary field. I am highly grateful to him and appreciate his invaluable guidance and supervision in the field of monetary research.

I would like to express my special thanks to other faculty members of Department of Economics, PNC, Pokhara, for their constructive and critical encouragement at various stages of my work. I am also equally grateful to respected Professor Lekhnath Bhattari for supporting me in giving guidance in review of literature during the preparation of the thesis.

The word would be insufficient to convey the depth of gratitude to my father Ananta Raj Adhikari, mother Roma Adhikari and family members for invaluable supports and their help has been a great source of encouragement and inspiration to me. I would also like to acknowledge the help I have received from all the staff of Western Regional Library. P.N. Campus, Pokhara. I would like to thank all those who directly or indirectly help me to bring this thesis to completion.

I would also like to thank and appreciate the help and support provided by the staff of Nepal Rastra Bank, Ministry of Finance and Central Bureau of Statistics.

## ***ABSTRACT***

This study examines the monetary approach to the Nepal balance of payments for the period FY 1990/91– FY 2015/16. Through the reserve flow equation, it tests whether different monetary variables played a significant role as a disturbance by using simple linear regression model. The main objective of this study is to find whether the monetary variables that is money supply, income, price, interest and domestic credit are responsible to produce fluctuations in BOP of Nepal or not. To achieve this objective, the study applies simple regression model for time series data.

For the balance of payments, the average mean is 32.61 and standard deviation is 53.63. The largest and the smallest value are 1877.80 and -3.34 respectively. For all the variables, mean is highest for the money supply and standard deviation is the lowest for interest rate. There is a positive correlation of the balance of payments with net domestic assets, money supply, inflation rate and real GDP. However, there is a negative correlation of the balance of payments with rate of interest rate. The correlation is very high between the balance of payments and the domestic credit.

The summary of the regression result in above table shows that, in the short run when the value of explanatory variable that is money supply, inflation rate, Real GDP, interest rate and net domestic assets are held constant at zero value, the average value of balance of payments is 63.079 units. It can be said that the estimated coefficients have all expected sign. The coefficient of the money supply is - 0.026 implying that one percent increase in money supply decreases the balance of payments by 2.6 percent. Similarly, one percent increase in inflation and real GDP will also decrease balance of payments by 0.886 percent and 2.032 percent respectively. Likewise, one percent increase in interest rate and net domestic assets will increase balance of payments by 64 percent and 27.1 percent.

The 't' value of the coefficient of money supply is - 0.0271, which is significant, that is if money supply increases, balance of payments is decreased. Again, the 't' value of coefficient of inflation and real GDP are - 0.690 and -1.231, which are significant, that is if both inflation and real GDP are increased respectively, balance of payments will decrease. Likewise, the 't' value of coefficient of interest rate is 0.196, which is insignificant, that is if interest rate increases, balance of payments is increased. Again, the 't' value of coefficient of net domestic assets is 1.680, which is insignificant, that is if net domestic assets increases, balance of payments is also increased. There is almost 88 % of the variation in the balance of payments (BOP) in Nepal is explained by, money supply, interest rate inflation, net domestic assets and real GDP. On the other hand, there is a statistically significant evidence of positive autocorrelation.

The empirical results showed that monetary variables do not play an overwhelming role in determining Nepal's balance of payments. The significant relationships were found among money supply, real GDP, inflation and balance of payments, which reflected a strong negative relationship, while reflected a strongly positive relationship among interest rate and net domestic assets and balance of payments as posited by the monetary approach to balance of payments. The results evidently showed that, although some variables suggested by the monetary approach play significant roles in the disturbance, but the balance of payments is not a purely monetary phenomenon. Therefore, disequilibrium in the Balance of payments cannot be corrected only through monetary actions by the authorities. Some other measure should also be kept under consideration like increase in exports, improving quality of products, sustained growth in industrial and agriculture sectors and decrease in imports.
