DECLARATION

I hereby declare that the thesis entitled "**Impact of Shivapuri National Park in Sustainable Livelihood of Local People: A Case Study of Sundarijal VDC, Kathmandu District**", Central Department of Rural Development, Tribhuvan University, is entirely my original work prepared under the guidance and supervision of my supervisor. I have made due acknowledgements to all ideas and information borrowed from different sources in the course of writing this- thesis. The- result of this thesis- have not been presented or submitted anywhere else for the award of any degree or for any other purpose. I assure that no part of the content of this thesis s has been published in any form before.

.....

ACKNOWLEDGEMENTS

It is my great pleasure to submit this- thesis under the guidance of Mr. Ratna Mani Nepal, Lecturer, Central Department of Rural Development, Tribhuvan University. I heartily appreciate his invaluable supervision and useful guidance and no words can fully express my feeling of gratitude to him. I would like to express my gratitude for Prof. Dr. Pushpa Kamal Subedi (Head of the Department), for allowing me to carry out this thesis work.

My most sincere thanks goes to all the key informants and other respondents who, at the cost of their work and time, patiently answered the questions regarding the research. I must appreciate the kind- help of all my family members during the preparation of this thesis-.

I must appreciate the kind help of all my friends during the preparation of this thesis.

Krishna Raj Pokharel

ABSTRACT

The thesis entitled "Impact of Shivapuri National Park In Sustainable Livelihood of Local People (A Case Study of Sundarijal VDC of Kathmandu District)", submitted to the Department of Rural Development, Patan Multiple Campus is based on primary data, collected from Mulkharka urea of Sundarijal VDC in Kathmandu district. The general objective of this study is to .find out the role of Shivapuri National Park in the sustainable livelihood of the people living nearby. The specific objectives are; a) to analyze the policies and programs relating to Shivapuri National Park, b) to assess the impacts of Shivapuri National Park in livelihood of the local people, and c) to assess the people's awareness about conservation of nature.

Protected areas are those areas that are established for conservation of nature, environment and biodiversity. In recent years, due to depletion of biodiversity with the degradation of environment there is an imbalance in nature. The livelihood of people, adjacent to such areas is vulnerable. The conflict between such areas and people is arising day by day for the use of natural resources. Protected areas can be known in various forms, i.e., National Parks Bufffeer zones, Strict Nature Reserves, Wildlife Reserves, Conservation Areas, and Hunting Reserves. Depletion of biodiversity affects the existence of human life, so establishment of protected areas plays significant role in the conservation of nature and existence of mankind in this planet.

Shivapuri National Park is a new, pork and was established in 2002. It was the main source offuel wood. fodder and timber for she local people before the declaration of Wildlife Reserves. The Government of Nepal tried to check the problems of deterioration of natural ecosystem 1976 and established development project in guidance and supervision of Shivapuri Development Board. Later, the area was gazetted as Shivapuri Watershed and Wildlife Reserve in 1984. This is only one of Nepal's Protected Area that lies entirely within the Middle Hills physiographic zone.

This study relates to the Mulkharka area of Sundarijal VDC in Kathmandu district. It analyzes the policies and programs relating to the Shivapuri National Park: The

survey was conducted in 36 households by using simple random sampling method. Group discussion, observation and interview were applied for data collection.

The literacy rate of surveyed households was found 58.07 percent. The primary occupation of the respondents is agriculture which comprises 58.33 percent and other respondents are engaged in livestock rearing, small business and labour. Maize, millet and wheat are the major crops in the study area. The people in the study area heavily depend upon the traditional farming and livestock rearing so there is no significant positive change on their livelihood. Those community people were found in problem for their livelihood and livelihood strategy due to wild life. Such as community people do not get any compensation.

Total respondents are dependent on firewood for fuel Only one household has constructed bio-gas plant. Most of the respondents prepare alcohol, so consumption of firewood is very high. Over 33 percent of the households consume firewood upto 300 kg per month and 30.56 percent consume between 600-900 kg per month. The knowledge about alternative source of fuel was found very poor in the local people.

This study shows that the livelihood of local people of Mulkharka was found more vulnerable due to loss of access to the resources. in the present situation, there is no program of Shivapuri National Park for participatory conservation and -mutual co-existence. Conservation is not possible with the exclusion of the local people. Hence, the policy and program should be launched in favour of local people, which meet demand of the local people as well as conservation objective of the park and government as well. The alternative sources of fuel should be found and promoted for sustainable livelihood of local people. The buffer zone should be declared as soon as possible for participatory conservation and sustainable utilization of resources which will minimize the conflicts between park and people and assist in the sustainable development of the whole nation.
