*Letter of Certificate*

This is to certify that Mr. Sabin Aryal, a Student of academic year 2070/071 with campus Roll No: 08, Thesis number 1277, Exam Roll No: 280512 and T.U. registration number 9-1-43-32-2006 has completed this thesis under supervision and guidance of Mr. Dipak Mainali in the period prescribed by the rules and regulations of Tribhuvan University, Nepal. The thesis entitled on '**Influence of Symbols on Basic Level Students' in Solving Algebraic Problems'** has been Prepared based on the result of his investigation conducted during the Period 2017 under the Department of Mathematics Education, Central Department of Education, University Campus, Tribhuvan University, Kirtipur, Kathmandu, Nepal. I recommend and forward that this thesis submitted for the evaluation to award the degree of Masters of Education. (In Mathematics Education)

**Recommendation for Acceptance**

This is to certify that Mr. Sabin Aryal has completed his M.Ed. thesis entitled  
**'Influence of Symbols on Basic Level Students' in Solving Algebraic Problem'**  
under my supervision during the period prescribed by the rules and regulations of  
Tribhuvan University, Kirtipur, Kathmandu, Nepal. I recommend and forward his  
thesis to the Department of Mathematics Education to organize final viva-voce.

## **Dedication**

This work is affectionately dedicated to my Father Jib Prasad Aryal  
and mother Ambika Aryal who even in a very difficult  
situation, gave me a great span of their  
life for what I am now.

## **Acknowledgments**

First of all, I want to thank Department of Mathematics Education, Central Department of Education, Kirtipur, for providing me support and opportunity to carry out the research work.

I express my sincere thanks and deep gratitude to my respected supervisor Mr. Dipak Mainali for his valuable suggestions, guidance, kindness, encouragement and continuous support. His vigorous efforts made me to complete and present this research work in this form.

My sincere gratitude goes to Assoc. Prof. Laxmi Narayan Yadav, Head of Department of Mathematics Education, Prof. Dr. Hari Prasad Upadhyay, Chairman of Mathematics and Computer Science Education Subject Committee, Prof. Dr. Min Bahadur Shrestha and other respected teachers of Department of Mathematics Education, Central Department of Education, Kirtipur, Kathmandu for their invaluable comments, suggestions, encouragement and inspiration to complete this study.

I express my deep indebtedness to my all family members for their invaluable suggestions, co-operation and support. I am very much indebted to the teacher and school family for their kind co-operation for the conduction of the field study.

## **Abstract**

The purpose of this study was to explore the symbol sense of basic level students' in algebra, to identify the students' error in an operating algebraic problems and investigate students' uses and interpretations of mathematical symbols and the influences that symbols have on students' activities when solving tasks of algebraic problems. The researcher conducted a case study of seven grade students with a focus on the goals and activities they selected and the anticipations and reflections they made as they worked on algebraic problems in different settings. Data were collected and analyzed under the conceptual lens of an activity effect relationship conceptual and a symbol sense framework. Seven different student (cases) were investigated, and data were analysis. The researcher found that some symbols and symbolic structures had strong influences on students' choices in problem solving.

The researcher firstly visit the sampled school and assessment test were taken among 26 students. The seven multiple cases were chosen from poor as well as high performance in assessment. The researcher found that students' goals and activities are often influenced by the presence of inequality signs, fractions, absolute value symbols, and rational symbolic structures and tracheotomy sign, the equal sign influences students' goals, but as an indication for operations to perform instead of as a representation of a relation, students' goals and activities are often influenced by anticipations for particular symbols or symbolic forms to be contained in the result, activities and goals do not often include the symbol sense for making links between symbolic representations and graphical or numerical representations.

The researcher concluded that symbol sense includes understand that there is a constant need to check symbol meaning and to compare meanings with one's own expectations and intuitions. Teachers can demonstrate such reflective habits in the

classroom and help students learn the importance of constantly reflecting on the effect of an activity as simple as writing an equal sign. It might be helpful for teachers to ask students to read mathematical statements aloud from a textbook and to discuss the meanings of the symbols involved. Building symbol sense can help build students fluency with the complicated language of mathematics.
