Supervisor's Recommendation

I hereby recommend that the dissertation prepared under my supervision by **Mr. Suraj Karki** entitled "**Automatic Generation of Basis Set of Paths for White Box Unit Testing**" be accepted as fulfilling in partial requirements for the degree of M.Sc. in Computer Science and Information Technology.

Prof. Dr. Shashidhar Ram Joshi
Department of Electronics and Computer Engineering
Institute of Engineering, Pulchowk, Nepal
(Head)

Date: _____

Central Department of Computer Science and Information Technology

LETTER OF APPROVAL

We certify that we have read this dissertation work and in our opinion it is satisfactory in the scope and quality as a dissertation in the partial fulfillment for the requirement of Master of Science in Computer Science and Information Technology.

Evaluation Committee

Prof. Dr. Jeevan Jyoti Nakarmi
Head, Central Department of Computer
Science and Information Technology
Tribhuvan University

Prof. Dr. Shashidhar Ram Joshi
Head, Department of Electronics and Computer
Engineering, Institute of Engineering
Pulchowk, Nepal
(Supervisor)

(External Examiner)

(Internal Examiner)

ACKNOWLEDGEMENT

The completion of this thesis was made possible by the contributions, knowledge and support of many individuals. At first, I would like to express my gratitude to my parents, who offered me the opportunity of education they never had.

I am deeply indebted to Prof. Dr. Shashidhar Ram Joshi, the supervisor of my thesis, and Mr. Bhogendra Mishra, co-supervisor of my thesis, for their valuable guidance and expertise as well as for their kind advice, encouragement, and constant support. I am grateful to the Head of the Central Department of Computer Science and Information Technology, Prof. Dr. Jeevan Jyoti Nakarmi, for his help and support. I am also grateful to Prof. Dr. Devi Dutta Paudyal and Dr. Tanka Nath Dhamala, former Head of the Central Department of Computer Science and Information Technology for their advice and support during my study period at the department.

I am also grateful and thankful to all the respected teachers, Dr. Onkar P. Sharma (Marist College, USA), Dr. Subarna Shakya, Mr. Sudarshan Karanjit, Mr. Min Bahadur Khati, Mr. Bishnu Gautam, Mr. Hemanta G.C., Mr. Dinesh Bajracharya, Mr. Sammujjal Bhandari and others for granting me broad knowledge and inspirations during my study period in Central Department of Computer Science and Information Technology (CDCSIT).

I would like to thank all the colleagues at the CDCSIT for the pleasant work atmosphere. I am indebted to my friends Mr. Laxman Thapa and Mr. Yoga Raj Joshi for their valuable suggestion and help during the preparation of this dissertation. I would also like to give gratitude to my friends Mr. Suresh Khatiwada, Mr. Sushil Nepal and Mr. Bhoj Raj Ghimire to encourage me to finish this dissertation in time. Finally, I must thank to all my family members for cooperating with me while I was doing this work.

ABSTRACT

Software testing is defined as the process of executing the program with the intent of finding an error that ensures the correctness, completeness and quality of the developed software. Black-box and white-box testing are the two major techniques for software testing. In black-box testing, no information about the internal structure of the program under testing is available. However, in white-box testing, a complete source code or the internal structure is available.

Unit testing of conventional or object-oriented software makes heavy use of white-box testing techniques, specifically basis path testing. Basis path testing is a white-box testing technique that uses a Control Flow Graph (CFG) of a program under test to generate a basis set of independent paths. Different techniques have been proposed in this thesis to generate basis set of independent paths.

In this thesis, we implemented an algorithm to develop a software tool that performs the following three tasks:

-) Constructs a control flow graph of a given program based on the pseudocode.
-) Computes the cyclomatic complexity of the control flow graph.
-) Generates a basis set of independent paths of the control flow graph.

Experiments on our tool show that the algorithms implemented for control flow graph construction, computation of cyclomatic complexity and generation of basis set of independent paths for a program under test gives acceptable results and yield results in a reasonable time. It has been observed that the algorithm implemented in our program generates a basis set of paths for a given control flow graph in $O(\max(n, e))$ time complexity where n is the number of nodes and e is the number of edges in the control flow graph.
