Recommendation

I hereby recommend that the dissertation prepared under my supervision by **Mr. Bishnu Prasad Pandey** entitled “**Cyclic Sequences for Min-Max Objective in Mixed Model Just in-Time Production System**” be accepted as a partial fulfillment of the requirement for the degree of Master of Computer Science, from Tribhuvan University, Nepal. In my best knowledge this is an original work in computer science.

Dr. Tanka Nath Dhamala

Head of the Department,

Central Department of Computer Science

and Information Technology,

Date:

Evaluation Committee

We certify that we have read this dissertation work and in our opinion it is satisfactory in the scope and quality as a dissertation as the partial fulfillment of the requirement of Master in Computer Science and Information Technology from Tribhuvan University, Nepal.

ABSTRACT

Cyclic scheduling has received considerable attention in recent years as an effective technique for repetitive manufacturing. Cyclic scheduling has been primarily studied under deterministic assumptions. In practice, stochastic variability exists and must be taken into account. The cyclic scheduling problems that arise in manufacturing are studied in this dissertation. Starting with practical Just-in-Time sequencing problem with given set of sequences as precedence constraints, efficient algorithm which obtains an optimal solution for the maximum deviation objective in the single level is studied. From this study, formulation for solving min-max-absolute-chain problem in cyclic paradigm is introduced. Moreover, the study purposes algorithms for implementation of cyclic version of min-max-absolute-chain problem. With its implementation, repetitive manufacturing industry could benefit.

ACKNOWLEDGEMENT

It is a great feeling to thank all, who encouraged me and made contributions to my work. I would like to express my deep and sincere gratitude to my supervisor, Dr. Tanka Nath Dhamala, Head of the Department, Central Department of Computer Science and Information Technology, Tribhuvan University for his detailed and constructive comments, and for his important support throughout this work. Dr. Dhamala, apart from guiding me, also provided plenty of research papers.

I express my warm and sincere thanks to Prof. Dr. Devi Dutta Paudyal (Former Head, Central Department of Computer Science and Information Technology) for his inspiration and encouragement. I am grateful to Mr. Bishnu Gautam for his valuable suggestions.

I warmly thank to the respected teachers Prof. Dr. Shashidhar Ram Joshi, Dr. Subarna Shakya, Prof. Dr. Onkar Sharma, Mr. Arun Timalisina, Mr. Sudarshan Karanjit, Mr. Min. B. Khati, Mr. Samujjwal Bhandari, Mr. Hemanta B.G.C., Mr. Dinesh Bajracharya and all others for the knowledge and inspirations they give me in the time period of two years. I would also like to thank Mr. Dipak Pandey who gave me untiring help during my difficult moments.

During this work I have collaborated with many colleagues for whom I have great regards, and I wish to extend my warmest thanks to all those who have helped me with my work in the department. I owe my loving thanks to my parents for their constant support and encouragement.

Bishnu Pd. Pandey

CDCSIT, T.U.
