

**DISTRIBUTION AND POPULATION STATUS OF HIMALAYAN
MUSK DEER (*Moschus chrysogaster*, Hodgson 1839) IN
DHORPATAN HUNTING RESERVE,
NEPAL**

**BY
MAN BAHADUR KARKI**

**A DISSERTATION SUBMITTED TO CENTRAL DEPARTMENT OF
ZOOLOGY FOR THE PARTIAL FULFILLMENT OF
MASTER'S DEGREE IN ZOOLOGY (ECOLOGY)**

**INSTITUTE OF SCIENCE AND TECHNOLOGY
TRIBHUWAN UNIVERSITY, KIRTIPUR
KATHMANDU NEPAL**

2008

Recommendation

It is my pleasure to mention here that Mr. Man Bahadur Karki has carried out dissertation entitled “**DISTRIBUTION AND POPULATION STATUS OF HIMALAYAN MUSK DEER (*Moschus chrysogaster*) IN DHORPATAN HUNTING RESERVE, NEPAL**” under my supervision and guidance. This is the candidate’s original work and as far as my knowledge it has not been submitted for any other degree. Therefore, I recommend that the dissertation be accepted for the partial fulfillment of the requirement for the degree of Master’s of Science in Zoology specialization in Ecology.

Date: 28th Dec. 2008

Mr. Hari Prasad Sharma

Lecturer,

Central Department of Zoology

Tribhuvan University,

Kathmandu, Nepal.

Approval

On the recommendation of Supervisor **Mr. Hari Prasad Sharma**, Lecturer, Central Department of Zoology, Tribhuwan University, the dissertation work entitled “DISTRIBUTION AND POPULATION STATUS OF HIMALAYAN MUSK DEER (*Moschus chrysogaster*) IN DHORPATAN HUNTING RESERVE, NEPAL” submitted by **Mr. Man Bahadur Karki** has been approved for the partial fulfillment of the Master’s Degree in Zoology with Ecology as specialization paper.

Date: 28th Dec. 2008

Prof. Vasanta Kumar Thapa, Ph.D.

Head of Department

Central Department of Zoology

Tribhuwan University

Kirtipur, Kathmandu

Declaration

I hereby declare that the work presented in this dissertation has been done myself and has not been submitted elsewhere for the award of any degree. All sources of information have been specifically acknowledged by references to the authors or institution.

Date: 28th Dec. 2008

Man Bahadur Karki

Acceptance

The dissertation work entitled “DISTRIBUTION AND POPULATION STATUS OF HIMALAYAN MUSK DEER (*Moschus chrysogaster*) IN DHORPATAN HUNTING RESERVE, NEPAL” submitted by **Mr. Man Bahadur Karki** has been accepted for the partial fulfillment of the Master’s Degree in Zoology with Ecology as specialization paper.

Abstract

The Dhorpatan Hunting Reserve (DHR), the only hunting reserve of the country, serves as an ideal habitat for Himalayan musk deer. The DHR allows the trophy hunting of the blue sheep but poaching of other species including the musk deer is ever increasing in the reserve. The research aimed to explore the distribution and population of the musk deer in the few blocks of the reserve. One seasonal study was done from March–May, 2007. 3 musk deer were counted during a silent drive in the Dharkharka and Khokriban of Barse block and this indicated the population density of the musk deer in the Barse block with 1.5 ind./sq.km. Musk deer in the study area mostly utilized the 60° slopes and were almost uniformly distributed along the North-East, North-West and South-East aspects. The musk deer in the DHR were distributed within the narrow altitudinal range of 3400-4000 m and mostly concentrated within 3600-3800 m due to different factors like availability of most coveted vegetation and other external interferences at other elevations. 25 species of trees, 20 species of shrubs and 30 species of herbs were recorded in the study area. Among the tree species *Abies spectabilis*, *Rhododendron* spp. and *Betula utilis* were most prominent with high IVI values. The musk deer in DHR mostly preferred the forest area followed by the shrub land and then the grassland. The musk deer in the reserve were mostly threatened with poaching and habitat destruction by deforestation and fire. The deer were also highly threatened by the livestock encroachment in the habitat. The musk deer poachers mostly preferred snare for trapping them while in the past the poachers used poisons, dogs, bow and arrow, etc. for killing the musk deer. Musk deer population has been decreasing in the reserve. The reserve authority should encourage the local residents towards the musk deer conservation and should increase the guard posts and patrolling in the reserve area with active participation of local people.

Key words: Musk deer, habitat, population, Dhorpatan Hunting Reserve, Poaching

Acknowledgements

I am deeply indebted to Mr. Hari Prasad Sharma, Lecturer in Central Department of Zoology, T.U., Kirtipur, under whose noble guidance this dissertation work has been carried out. I most gratefully acknowledge him for the continuous valuable suggestions throughout the long duration of this research work.

I express my sincere gratitude to Professor Dr. Vasanta Kumar Thapa, the Chief of Central Department of Zoology for his kind administrative support. I owe my great thanks to Professor Dr. Tej Kumar Shrestha, the former Chief of the Central Department of Zoology. Thanks are also due to all the administrative staffs of the Central Department of Zoology, who were always there for me to support with every kinds of administrative works.

My sincere thanks are also due to Wildlife Research and Conservation Group Nepal (WRCGN) and Nepal Institute of Science and Technology (NAST) for their financial support.

I would like to express my heartfelt gratitude to Mr. Ripu Mardan Kunwar, Taxonomist for his cordial help during the identification of the plant species in the study site itself.

My unforgettable thanks are due to Mr. Barna Bahadur Thapa, Conservation officer of Dhorpatan Hunting Reserve and Mr. Manoj Kumar Sah, the former, Conservation officer who actually made my dissertation possible by providing permission into the Reserve for my field work.

Thanks are also due to Mr. Junga Bahadur Adai, game scout of the reserve and all the staffs of the reserve those who supported me during my field work.

I would also like to acknowledge all the local residents of the reserve and its buffer zone who were really friendly during the collection of the data through the questionnaires.

I would like to express my cordial thanks to my respected brother-in-law Mr. Milan Bahadur K.C for his continual support in computer settings.

I am also gratified to my friends Ramnath Kandel, Rajesh Goit, Santosh Adhikari, Khagendra Adhikari, Pabitra Muni Bajracharya and Miss Bhima Thapa who played a very encouraging and supportive role during my research period.

Last but not the least; I am greatly indebted to my esteemed parents for their continuous inspiration and support.

Man Bahadur Karki
