ACKNOWLEDGEMENTS

Longing dream of research on digital libraries of Nepal is carried out and extraordinary experiences are earned, for this satisfaction the Central Department of Library and Information Science, Tribhuvan University is owed for always.

Dr. Madhusudan Karki, the head of the department is offered much respect for his excellent cooperation.

The outgoing head of the department and teacher Nirmala Shrestha has always been source of inspiration. She did her best to make this thesis "a best one" by providing various books, journals, articles overwhelmingly including crucial insights for research. For these all opportunity and for the permission to carry out this research, I am always indebted to her.

Bhim Dhoj Shrestha ventured continuously, despite his hectic schedule, as a good research guide. He is acknowledged for his continuous and indefatigable labour to bring this thesis on time. My fortune can never pay the debt of the insights and corrections from our teacher, who is also the external examiner for this thesis, Rudra Prasad Dulal. Dr. Mohan Raj Pradhan, and Bishnu Prasad Aryal helped significantly, I am indebted to them all. Late Leela Dahal, simple and ideal person of LIS profession is sadly missed for always.

Krishna Mani Bhandary, Bina Vaidya, Chiranjibi Neupane, Indira Dali, Lal Bahadur Chouhan, Indra Prasad Adhikari, Kedar Ghimire, Ram Saran Thapa, Anil Jha, Jagadish Aryal, Min Kumari Dallakoti, Sudeep Khanal, Sajan Subedi, Pashupati Nath Adhikari, Ujol Sherchan are owed for their help.

I always admire Sudeep Dhakal's time, devotion and investments in this research; without his cooperation this thesis would suffer much. Dr. Bishnu Hari Nepal, Philip H. Pierce, Bhola Kumar Shrestha, Dasharath Thapa, Durga Prasad Acharya , Pravash Pokhrel, Ashok Thapa, Tanka K.C are kind enough to provide help for this thesis.

Friends of LISSA, TULSSAA, NLA, Voice of Library, First Library Day Programme Organizing Committee—2065, NEspA (Nepala Esperanto Asocio), NEJO (Nepala Esperanta Junalara Organizo) are owed much.

The staff Rabi Maharjan, Bhola Mahato, Mina Lama, at the department kindly helped during the period of research. Last but not the least I owe much for the works referenced.

Bishwa Raj Gautam

The Researcher

ABSTRACT

The thesis "DIGITAL LIBRARIES IN NEPAL: RELEVANCE OF DIGITAL CONTENTS FOR USERS AND TECHNOLOGICAL COMPETENCE OF THE LIBRARIANS" in general focuses on the current scenario of digital libraries of Nepal specifically in the areas of contents and technology. The inefficiency of traditional library system to cope with mounting pressure of users and their limited time to find out relevant and updated informational resources such as geographical, scientific, economical content. Traditional libraries can not protect the deterioration of valuable informational materials which are frustratingly growing in rapid speed. To solve these all problems a new form of library is emerged. It is digital library. Digital library system is believed to be a panacea to all these problems as granted. But to find out the efficiency of digital library, relevance of content and the technological competence of the librarians this study is carried out. So that the entire field of LIS would get insights for further avenues. Its objectives are firstly to find out whether the digital contents in digital library are enough and relevant for the users secondly to find out whether the targeted users' needs are duly quenched or not thirdly to find out the competence of the librarian to handle the modern technological devices and their operations in digital library environment, fourthly to compare and contrast the scenario of digital content and technological competence of selected libraries and lastly to provide recommendations, based upon findings, to improve the situation of content and technological competence for the digital library system

This study has focused on the aspects of relevance of digital contents housed in or served through the digital library and competence of the librarians to operate technological infrastructure used in their respective library. Four digital libraries British Council Learning Center Library (BCLCL), International Center for Integrated Mountain Development Library (ICIMODL), Mountain Forum Secretariat Library and Tribhuvan University Central Library (TUCL) have been selected. For technological competence of the librarian, eight libraries i.e. including the mentioned above and Kathmandu Medical College Library (KMCL), Madan Puraskar Pustakalaya (MPP), National Judicial Academy Library (NJAL), Social Science Baha Library (SSBL) have been purposively selected; however, the respondents were on-the-available basis. The sample population is comprised of 86 respondents. Among them 60 are digital library users but later 10 users from each library were randomly selected to make the research more uniform and comparable and 9 librarians who are

responsible for decision making have been included for the evaluation of digital contents and 17 librarians have been included for their level of technological competence. The researcher has used a set of questionnaire, informal interview, and observation as his basic instruments of research. The questionnaire had 3 parts including a cover letter clarifying about the task. Part I was to be filled up with personal information of the respondent. Part II consisted of real questions. Part II '1' consisted of questions to be filled up by the actual users of the digital library on the relevance of contents. Part II '2' had questions to be filled up by the librarians about the contents, their scope and policy to acquire the contents etc. Part II '3' was for the persons who indeed were related to operate the technological devices to build digital library and it had questions to reveal the abilities of librarian to operate the infrastructure used in their respective library.

The major findings of the study show the information being served by digital libraries is relevant to the target-users and the librarians are competent to handle daily chores of digital library system. Moreover, academically 59% librarians have received degree (Bachelor or above) in library and information science, but 11% have received degree in computer science, 30% have been providing service though they are from other than library and information science and computer science. All the librarians are abreast of the new technology with that what is implanted in their digital library. Most of them have received in-service/ refresher course. However the digital libraries and librarians are facing many hardships such as educational, economical, societal, technological etc. some of the difficulties are handling hardware / software. Various natures of database, digital materials, key words assigning, value-added information assigning, etc. also made their job difficult. Almost all the librarians have replied they have tried their best to solve the encountered problem, they (55%) have received training and 45% have hired experts pertinent to the problems but contradictorily 65% of them are unable to do hardware related tasks. This is because librarians (47%) did not have to do hardware related tasks most of them (14%) have lacked training. All the librarians are able to update their digital libraries. Most of the librarians (82.5) are basically involved in content downloading and updating their digital library. 57.5% of the weight is given that the librarians believe monetary factor is the main which has a significant role in the digital library development. Because money is being lacked to buy digital library infrastructure and to train the librarians. Where as 37.5% weight is given that money is only means. Therefore the gap in technology, low level of

competence of librarian, culture to stick in traditional library system are responsible for the digital library system to be paralyzed.

For sound development of digital library system full-text and abstracts service should be made strong, ensuring the access of historical knowledge. Digitization should be prioritized to make them available in digital form. Training, workshops, refresher course should be organized. All the digital libraries should recruit professional librarian who have received bachelor degree or above in LIS. Every library should encourage digital library project/section economically, institutionally and morally and user education should be imparted.

PREFACE

This research work on digital libraries in Nepal in general it focuses on the current scenario of digital libraries of Nepal specifically in the areas of digital contents housed and served to users and technological competence of the librarians. For our discipline i.e. LIS we recognize the centrality of communication in modern society and the increasing demand for quality information by commercial and public systems. These have turned the field of librarianship and information science into a world that is dynamic, fascinating and much in demand. It is not by accident that LIS is considered the field of the future of the 21st century.

The librarian—information specialist must be a person with social awareness, broad education, and ability to communicate, possess technical knowledge, and be able to navigate among the huge sources of information locate and pull out the information required through the use of sophisticated search methods on computer to keep pace with the acceleration of research, mounting societal and demographic pressure, short span of time of academicians, business persons, decision makers, doctors, executives, planners/ policy makers and even general public.

In an information and knowledge based society most of the informational products should be cheaper, which would occupy as minimum space as possible but could be communicated in greater speed ensuring its preservation. This is possible through digital library. This thesis has documented various important aspects of library since its evolution. From the pioneering efforts of digital library it has presented various bases, reasons, rationale, i.e. digital content, technology and skills, of digital libraries. Digital libraries in Nepal are, however in nascent stage, getting widespread importance among researchers and academicians.

This research study consists of six chapters. First chapter deals with the introduction of study. The second chapter deals with literature review. The third chapter is focus of study. Research methodology, research design population, sampling, procedure, data collection procedure and data analysis procedure are discussed in the fourth chapter. Fifth chapter presents analyzed data, their presentation and interpretation to evaluate either the set objectives or hypotheses are positively met or not. Sixth, the final, chapter deals with summaries, conclusions and recommendations
