AN IMPACT EVALUATION OF THE COMMUNITY DRINKING WATER AND SANITATION PROJECT AT CHANDRAGADHI IN JHAPA DISTRICT, NEPAL

A thesis submitted in partial fulfillment of the requirements for the degree of Master of Arts

By Dipak Bhattarai Reg. No: 6-1-22-1145-96 Exam Roiino-3128

Central Department of Rural Development Faculty of Humanities and Social Sciences Tribhuvan University, Kirtipur Kathmandu, Nepal

December, 2006

RECOMMENDATION LETTER

This thesis entitled An Impact Evaluation of the Community Drinking Water and Sanitation Project at Chandragadhi in Jhapa District, Nepal prepared by Dipak Bhattarai, under my supervision in partial fulfillment of the requirements for the degree of Master of Arts in Rural Development, is hereby recommended for its final evaluation. To the best of my knowledge this is his own innovative work presented in the format prescribed by the Faculty of Humanities and Social Sciences.

Suman Baskota Research Supervisor

APPROVAL LETTER

This is to certify that the thesis submitted by Dipak Bhattarai entitled An Impact Evaluation of the Community Drinking Water and Sanitation Project at Chandragadhi in Jhapa District, Nepal has been approved by the department in the prescribed format of the Faculty of Humanities and Social Sciences.

EVALUATION COMMITTEE
Prof. Dr. Pradeep Kumar Khadka Head of the Department
Umesh Acharya

Suman Baskota
Research Supervisor

ACKNOWLEDGEMENT

A number of persons and organizations helped me to prepare this study report. All of them have equally contributed their suggestions and help to the whole life cycle of this report. I highly appreciate their help and I am indebted to all of them.

My special and heartiest gratitude goes to my supervisor Mr Suman Baskota, lecture at the Central Department of Rural Development for his regular interest, valuable guidance, encouragement, comments and suggestions for the preparation of this project report instead of his valuable business.

I am equally indebted to Dr. Pradeep Kumar Khadka, Professor and Head of the Central Department of Rural Development and other respectable teachers/professors for their co-operation. This study would not have been possible without their incentives for researcher.

It is my opportunity to express my sincere thanks to Mr. Santosh Kumar Dahal, the Secretary of Chandragadhi VDC and other staff members of the office for providing me with the data needed for this study.

Also I would like to express my sincere thanks to the Satar community, the Satar People, their children and all the people of Chandragadi VDC Who helped me significantly to succeed my study report despite their business.

Last but not least, I have to express my sincere gratitude to my revered parents, Brother Dinesh Bhattarai, sister in law Anju Bhattarai, Sisters Deepa Bhattarai and Paru Bhattarai and brother in laws Madan Bhatta and Madhusudhan Khanal who have supported me throughout the whole period of the study.

November 2006 Dipak Bhattarai

ABSTRACT

To provide safe water, various efforts have been made by the government sector as well as the private sector in the process of planned development. But, the people's participation have not received priority until the Seventh Plan and it was only from the Eighth Plan that the mobilization of people on water sectors as well as other development sectors started to gain attention. Till now many development sectors including the water sectors are already handed over to communities and this has brought good results. Despite being the second richest country in the world for water resources, Nepal's utilization of water resources has not been satisfactory because of poor economic condition, unskilled manpower and corruption. So, the priority should be given for proper uses of these water resources and provide safe and sufficient water to the people.

This study has been conducted at ward 6 of Chandragadhi VDC in Jhapa district. The general objective is to analyze the impact of the project in the study area. Primary and secondary data were used to collect the information, and tools like observation, formal and non-formal discussions, interviews were held to collect other necessary information. Descriptive and analytical research designs have been followed to describe and examine the findings of the study. Out of the total of 300 beneficiary households in ward 6, 80 household members were taken as the sample, following the simple random sampling method.

The study shows that the people have experienced significant changes after the initiation of the project. They are satisfied with the project because of the supply of safe and sufficient water. They are getting 10-15 hours of water supply per day and the supply of water is regular. Most of the people in the study area are using this project for more than 15 years and they think that this project has done better than before after it was handed over to the community. People's participation in the project is satisfactory, as people from all backgrounds are participating equally and till now no conflict has occurred among the users in connection with water distribution. The water users committee of this project has done some sanitation works like the setting up of slaughter

house and public taps, and it has made more plans for the future. This project has also created both temporary and permanent jobs for the local people and there is sufficient manpower in the project for maintenance.

Based on its findings, the paper suggests some strategies in order to improve the status of the project in the future. Besides, it also indicates some areas/potentials for further research.
