## RECOMMENDATION

It is my pleasure to mention here that Mr. Ram Nath Kandel has carried out dissertation entitled “**DISTRIBUTION AND CONSERVATION STATUS OF RED PANDA (*Ailurus fulgens*) IN DHORPATAN HUNTING RESERVE, NEPAL**” under my supervision and guidance. This is the candidate’s original work and as far as my knowledge it has not been submitted for any other degree. Therefore, I recommend that the dissertation be accepted for the partial fulfillment of the requirement for the degree of Master’s of Science in Zoology specializing in Ecology.

---

**Mr. Hari Prasad Sharma**

Lecturer,

Central Department of Zoology

Tribhuvan University,

Kathmandu, Nepal

**Date:**

## Approval

On the recommendation of Supervisor Mr. Hari Prasad Sharma, Lecturer, Central Department of Zoology, Tribhuvan University, the dissertation work entitled “DISTRIBUTION AND CONSERVATION STATUS OF RED PANDA (*Ailurus fulgens*) IN DHORPATAN HUNTING RESERVE, NEPAL” submitted by **Mr. Ram Nath Kandel** has been approved for the partial fulfillment of the Master’s Degree in Zoology with Ecology as specialization paper.

Date:

\_\_\_\_\_

**Prof. Vasanta Kumar Thapa, Ph.D.**

Head of Department

Central Department of Zoology

## Acceptance

The dissertation work entitled “DISTRIBUTION AND CONSERVATION STATUS OF RED PANDA (*Ailurus fulgens*) IN DHORPATAN HUNTING RESERVE, NEPAL” submitted by **Mr. Ram Nath Kandel** has been accepted for the partial fulfillment of the Master’s Degree in Zoology with Ecology as specialization paper.

### Expert Committee

---

Prof. Vasanta Kumar Thapa, Ph.D.  
Head of Department

External Examiner

---

Internal Examiner

Date:

## **Declaration**

I hereby declare that the work presented in this dissertation has been done myself and has not been submitted elsewhere for the award of any degree. All sources of information have been specifically acknowledged by references to the authors or institution.

Date:

---

**Mr. Ram Nath Kandel**

## **Acknowledgements**

My heartfelt gratitude is to my academic supervisor Mr. Hari Prasad Sharma, Lecturer of Central Department of Zoology, Tribhuvan University for his perpetual advice encouragement and invaluable inspiration throughout the study period.

I would like to express my thanks to Wildlife Research and Conservation Group Nepal for providing me financial support during field visit.

I would like to thank Prof. Dr. Vasanta Kumar Thapa, Head of the Department of Zoology for providing administrative support. I am very much grateful to the Prof. Dr. Tej Kumar Shrestha, Former Head of Department of Zoology who continuously encouraged me to complete this work successfully.

I am grateful to Department of National Parks and Wildlife Conservation, Dhorpatan Hunting Reserve for providing research permission in the Reserve.

I would like to thank all the staffs of Dhorpatan Hunting Reserve especially Barna Bahadur Thapa (Conservation officer) and Manoj Kumar Shah (former Conservation officer), Janga Bahabur Adai (Senior Gamescout) who assisted me during the fieldwork. I also want to thank all local people and herders, who helped and participated in interviews and provided important information.

Last but not least, I express my deepest gratitude to Mr. Man Bahadur Karki who helped me regularly during the field work and Ripu Mardan Kunwar for his help during plant identification. I would like to thank Mr. Khagendra Adhikari and Mr. Rajesh Goit for their regular contribution during the preparation of this dissertation work.

I would also like to appreciate my parents for their valuable suggestion and continuous encouragement during this research work.

## Abstract

A survey of Red Panda was carried out in three blocks namely Barse, Fagune and Surtibang of Dhorpatan Hunting Reserve (DHR) to establish baseline information of this species from March- May, 2007. The distribution of Red Panda was assessed through informal discussions with local people, herders and reserve staff followed by the dropping survey. Vegetation analysis was done by using square quadrats of  $10 \times 10$  m<sup>2</sup> for trees and  $4 \times 4$  m<sup>2</sup> for shrubs to determine Important Value Index.

The study revealed the clumped type distribution pattern of Red Panda which was affected by different factors like presence of *Arundinaria* spp., north facing slope, water source availability, habitat condition, human activities, and livestock grazing. Altogether four Red Pandas were noticed and were identical in morphological characters. A correlation analysis of combined data on the distribution of Panda faecal pellets with elevation up to certain limit showed positive correlation. In the range of 3,200 to 3,500 m, the droppings of the Red Panda were more common than above or below the range where *Abies*, *Rhododendron*, *Betula* and *Arundinaria* were dominant. Red Panda most prefer northwest facing slope in the range  $30^{\circ}$  –  $40^{\circ}$  during the study period. A chi-square test performed showed that slope aspect differs with the distribution pattern of Red Panda. Because of the violence and insurgency, the management offices and check posts were transferred to the urban area. Illegal felling, logging, hunting, poaching and over exploitation were common during the study period. About 160 traps were collected and hand over to the Reserve officials. Occasional death of Red Panda was also recorded in Dharkharka of Barse block. Summer huts for livestock was one of the main threats for the conservation of Red Panda in DHR.

Key Words:- Red Panda, Dhorpatan Hunting Reserve, Distribution, Conservation threats, Livestock grazing, Poaching.
