ABSTRACT

The research entitled 'English Used in Medicine Marketing' is an attempt to find out the sentence patterns and functions of language used in medicine marketing. In order to do so, the researcher collected the data from both primary and secondary sources. The primary sources were the medical representatives of Kathmandu Valley. The sample population consisted of 30 different medical representatives who were selected by using stratified judgmental sampling procedure. The researcher took 10 representatives while detailing orthopaedic products, 7 while detailing paediatric products, 7 while detailing gynaecological products and 6 while detailing general products. The data were analyzed and interpreted by using simple statistical tool such as percentage to find out the sentence patterns and language functions. On the basis of the collected data, the language functions and sentence patterns were determined.

The findings of the research show that the language used by marketers is fixed, such as S-P-PC (A) and S-P-IO-DO (A), patterns are more commonly used. Similarly, language functions such as socializing, imparting and seeking factual information are more common. On the whole, the overall language seems some how different from other types of language.

The study consist of four chapters, which are given below:

The first chapter deals with the introduction. It consists of general background of the study, review of the related literature, objectives of the study, significance of the study and definitions of the specific terms.

The second chapter deals with the methodology adopted for the study. It encompasses sources of data, population of the study, sampling procedures, tools for data collection, process of data collection and the limitations of the study.

The third chapter deals with the analysis and interpretation of the data which is done in terms of language functions and sentence patterns. Percentage along with different tables and figures were used as statistical tools while analyzing and interpreting the data.

The last chapter deals with the findings and recommendations. On the basis of the analysis and interpretation, some significant findings are enlisted. On the basis of these findings, some recommendations for pedagogical implications and further researches are made. This chapter is followed by reference and appendices.
