RECOMMENDATION

This is to certify that **Ms. Deepika shrestha** has worked under our supervision and guidance on the thesis entitled “**Evaluation of different staining techniques (Ziehl Neelsen stain, Kinyoun stain, Modified Cold stain and Fluorochrome stain) for the diagnosis of pulmonary tuberculosis.**” To the best of our knowledge this is an original research work of her and has not been submitted for any other degrees.

(Supervisor)

Dr. Shyamal Kumar Bhattacharya

Additional Professor

Department of Microbiology

BPKIHS, Dharan, Nepal

Kathmandu, Nepal

(Supervisor)

Mr. Binod Lekhak

Assistant Professor

Central Department of Microbiology,

Tribhuvan University, Kirtipur

Date: _____

CERTIFICATE OF APPROVAL

On the recommendation of **Dr. Shyamal Kumar Bhattacharya** and **Mr. Binod Lekhak** this dissertation work by **Ms. Deepika Shrestha**, entitled “**Evaluation of different staining techniques (Ziehl Neelsen stain, Kinyoun stain, Modified Cold stain, and Fluorochrome stain) for the diagnosis of pulmonary tuberculosis**” has been approved for the examination and is submitted to Tribhuvan University in partial fulfillment of the requirements for degree of Master of Science in Microbiology (Medical).

Dr. Anjana Singh,

Head of the Department,
Central Department of Microbiology,
Tribhuvan University,
Kirtipur, Kathmandu, Nepal

ACKNOWLEDGEMENT

It is with great respect and deep sense of gratitude; I owe my sincere indebtedness to my supervisor **Dr. Shyamal Kumar Bhattacharya, Additional Professor**, who generously contributed valuable time and provided his constant support, unfailing encouragement, acute observation, constructive advices and accomplished guidance during entire period of this research work which enable me to carry out this endeavor successfully.

I wish to express most sincere gratitude towards my supervisor **Mr. Binod Lekhak, Assistant Professor** for his constant support, encouragement, constructive suggestion and efficacy which enable me to bring this thesis in present form.

I express my heartiest gratitude to **Dr. Anjana Singh, Head of Central Department of Microbiology** for her constant support, inspiration and encouragement. I would also like to share my eternal respect to **Prof. Sital Basnet and Dr. Prakash Ghimire, Associate Professor** for their innate inspiration, support, and encouragement.

I express my sincerest gratitude and deep respect to **Prof. Renu Dutta, Head** of Department of Microbiology, BPKIHS for her invaluable help and inspirational support during the time of my thesis.

It is an honour on my part to acknowledge profound indeptedness to **Dr. Soumiya Bhattacharya, Additional Professor**, Department of Anatomy, BPKIHS for her encouragement, inspiration and giving me her precious time in bringing this thesis in its final form.

I am sincerely indebted to **Mr. Iswori Poudel, Senior Statistician**, Department of Community Medicine, BPKIHS for giving me his valuable time for statistical analysis and I sincerely thank him for his critical appraisal and thoughtful suggestions. I express my heartfelt gratitude to **Mr. RM Pandey, Additional Professor**, visiting faculty (BPKIHS), AIIMS, for statistical analysis.

I take this opportunity to express my heartfelt gratitude to the **faculty teachers** of Central Department of Microbiology, TU and Department of Microbiology, BPKIHS for all their possible help and encouragement they provided me during the time of my study.

I must extend my sincere gratitude towards BPKIHS for giving me to an opportunity to perform thesis on this reputed institute.

I express thanks to the TB technical staffs for their moral support and help during the entire period of my thesis. I am immensely thankful and express my heartiest gratitude to my friends Mr Surendra, Ms Poonam, Ms Sirjana, Mr Bhola Raj and all my friends, colleagues, and well wishers for their moral support and invaluable help they provided during my study.

A very special acknowledgement to **my father, mother, and family members** who always stood by me, gave inner strength and confidence at all the time. No successful event in my life has been possible without their blessings. Finally, I thank **the almighty**, God who has guided me thorough out my life and showed his blessings.

Deepika Shrestha

ABSTRACT

Bacteriological examination of sputum is the cornerstone in the diagnosis of pulmonary tuberculosis in the developing world. The risk of spread of infection and emergence of drug resistant strain has created the need of rapid, sensitive and specific diagnostic test. This prospective study was performed in Tuberculosis research laboratory, Department of Microbiology, BPKIHS, Dharan with an objective to evaluate different staining techniques (Ziehl-Neelsen (ZN), Kinyoun, Modified cold (MC), and Fluorochrome) for detection of acid fast bacilli (AFB) for diagnosis of pulmonary tuberculosis

The study was cross-sectional study. All the samples were processed by modified Petroff's method. From each sample four smears were prepared and were stained with four different staining techniques: ZN, Kinyoun, MC, and Fluorochrome respectively. Culture was employed as gold standard for tuberculosis diagnosis.

A total of 1365 specimens from 500 patients were analyzed. 109 patients (21.8%) were diagnosed as having TB by culture. The positive yield found with the staining techniques were 14.2% by ZN, 13.8% by Kinyoun, 14.4% by MC and 17.6% by Fluorochrome staining methods. With reference to culture, sensitivity of ZN, Kinyoun, MC and Fluorochrome were found to be 57.8%, 56%, 59.6%, and 71.6% respectively. The specificity in ZN, Kinyoun and Fluorochrome methods was 98% and that in MC was 98.2%. The positive predictive value of ZN, Kinyoun, MC, Fluorochrome was found to be 88.7%, 88.4%, 90.3% and 90.7% and the negative predictive value of ZN, Kinyoun, MC, Fluorochrome was found to be 89.3%, 88.9%, 89.7% and 92.5% respectively.

This study indicates that the Fluorescent staining method was found most reliable out of the other staining techniques. The MC method also could be viable alternative to ZN and Kinyoun for primary diagnosis of tuberculosis.

Keywords: *M. tuberculosis*, Ziehl-Neelsen, Kinyoun, Modified cold, Fluorochrome stain
