

**TUBERCULOSIS AND HUMAN IMMUNO-DEFICIENCY VIRUS  
CO-INFECTION IN SUSPECTED TB PATIENTS**

A  
Dissertation  
Submitted to the Central Department of Microbiology  
Tribhuvan University

In Partial Fulfillment of the Requirements the Award of the Degree of  
Master of Science in Microbiology  
(Medical)

by  
**Sunita Maharjan**

Central Department of Microbiology  
Tribhuvan University  
Kirtipur, Kathmandu, Nepal  
2007

## RECOMMENDATION

This is to certify that Miss. Sunita Maharjan has completed this dissertation work entitled **Tuberculosis and Human Immuno-deficiency Virus Co-infection in Suspected TB patients** as a partial fulfillment of M.Sc degree in Microbiology under our supervision. To our knowledge this work has not been submitted for any other degree.

---

Dr. Anjana Singh  
Associate Professor  
Central Department of Microbiology  
Tribhuvan University  
Kirtipur, Kathmandu  
Nepal

---

Prof. Dr. Jeevan B. Sherchand  
Chief of Health Research Laboratory  
Department of Clinical Microbiology  
Tribhuvan University Teaching Hospital  
Maharajgunj, Kathmandu  
Nepal

Date: \_\_\_\_\_

## CERTIFICATE OF APPROVAL

On the recommendation of **Dr. Anjana Singh** and **Prof Dr. Jeevan Bahadur Sherchand**, this dissertation work of Miss. **Sunita Maharjan** is approved for the examination and is submitted to the Tribhuvan University in Partial fulfillment of the requirements for M.Sc degree in Microbiology.

Date: \_\_\_\_\_

## ACKNOWLEDGEMENT

I am extremely grateful to **Dr. Anjana Singh**, Head of Department, Central Department of Microbiology, Tribhuvan University for her expert guidance, constant encouragement and valuable suggestions for the completion of this thesis work and to bring out the best in this work.

Respectfully, I would like to express my deep sense of indebtedness and profound gratitude to **Prof Dr. Jeevan Bahadur Sherchand**, Chief of Health Research Laboratory, Department of Clinical Microbiology, Tribhuvan University Teaching Hospital, Maharajgunj for his inspiration, tremendous support, invaluable suggestions and continuous guidance during my research work.

I wish to extend my sincere gratitude towards my teachers at Central Department of Microbiology, **Prof Dr. Seetal Raj Basnyat, Dr. Prakash Ghimire, Dr. Shreekant Adhakari, Mr. Binod Lekhak, Ms. Shaila Basnyat** and all respected teacher and staffs for extending their helping hands in all the possible ways.

I am especially thankful to the staffs of DOTS center and Department of Clinical Microbiology Tribhuvan University Teaching Hospital, Maharajgunj for their ever-increasing support, guidance, constant help and valuable suggestions in the laboratory work. I am equally grateful to staffs of Health Research Laboratory for providing a rewarding workplace that fosters professional development.

I wish to reaffirm my admiration and special thanks to all friends of mine, especially, **Ms. Sarmila Tandukar** for her dear help, support, suggestions and assistance during whole period of this study.

Last but not the least, I wish to reiterate my acknowledgement to **my family** for their insightful help. I admire **my parents** for their moral support, meticulous attention, unconditional support and blessing in achieving the present academic degree on M.SC.

---

**Sunita Maharjan**

## ABSTRACT

Tuberculosis (TB) is one of the major public health problems in Nepal and HIV has become the most potent risk factor for the progression of TB infection as HIV-positive people are more likely to develop TB when newly infected or reinfected with *Mycobacterium tuberculosis*. The study was carried out in Health Research Laboratory, Institute of Medicine, Tribhuvan University Teaching Hospital during October 2006 to July 2007 with a general objective to determine TB/HIV co-infection cases visiting DOTS center in Tribhuvan University Teaching Hospital and Infectious and Tropical Disease Research and Prevention Center, Tripureshwor.

A total of 300 patients, visiting DOTS center of TUTH, Maharajgunj and Infectious and Tropical Disease Research and Prevention Center, Tripureshwor suspected of having TB infection and risk behaviour towards HIV were included. Out of 300 patients, 79 of them were diagnosed as TB infected cases. Only sputum samples were taken to diagnose pulmonary tuberculosis. Among patients diagnosed as having TB, higher number (83.54%) of male patients than female (16.45%) were found which was found to be statistically significant ( $\chi^2 = 11.47$ ,  $P < 0.01$ ). Highest prevalence of TB infection was found in age group 21-30 years followed by 51-60 years. About 34 patients out of 300 were recorded as HIV sero-positive among which 70.59% were males and 29.41% were females. Highest prevalence (44.12%) was found in age group 31-40 years. TB/HIV co-infected cases were found to be 13 (4.33%). Out of 34 HIV sero-positive cases, 21 of them were diagnosed as not to be infected with tuberculosis. Highest prevalence of TB/HIV Co-infection (38.46%) was observed in age group 31-40 years followed by 41-50 years with 30.77%.

Risk factors towards majority of TB/HIV co-infected patients were found to be IDUs and migrators. Many of the HIV infected and TB/HIV co-infected were revealed to have multiple sex partners. Regarding occupation, greater number of TB patients and HIV sero-positives were found to be involved in different services, followed by factory employee, business, housewives, drivers, agriculture etc.

<b>IV. MATERIALS AND METHOD</b>	49-56
Diagnosis of tuberculosis	49
Specimen collection	50
Acceptance or rejection of sputum sample	50
Microscopic examination of sputum	50
Smear preparation and heat fixation	50
Staining of fixed smear by Ziehl-Neelsen method	51
Observation of stained smear	51
Sputum culture	51
Processing of sample by modified Petroff's method	51-52
Inoculating the primary culture and incubation	52
Observation	52
Sub culturing and processing of organism	52
Diagnosis of HIV	52
Specimen collection for HIV Diagnosis	52
Processing of the blood sample	53
Principle of the procedure	53
Assay procedure	53-54
Calculations and result	54
Quality control	55
<b>V. RESULT</b>	57-68
Age and gender distribution of studied population	57
Educational status of studied population	58
Age and gender distribution of total TB positive patients	59

Age and gender distribution of 300 patients tested for TB and HIV infection	60
Distribution of patients tested for HIV	60-61
Age and gender distribution of HIV patients	62
Age and gender distribution of TB/HIV co-infected cases	63
Distribution of HIV infection with gender in TB infected patients	64
Distribution of Tuberculosis/HIV among tested patient	65
Distribution of tuberculosis with smoking habit of patients	66
Distribution of tuberculosis with alcoholic habit of patients	66
Occupational status of TB infected patients	66-67
Occupational status of HIV infected patients	67
<b>VI. DISCUSSION AND CONCLUSION</b>	69-76
Discussion	69-76
Conclusion	76
<b>VII. SUMMARY AND RECOMMENDATION</b>	77-79
Summary	77-78
Recommendation	78-79
